Vanguard FTSE Developed World ex-U.K. Equity Index Fund (the "Fund")

A sub-fund of Vanguard® Investments Funds ICVC

GBP Acc

ISIN: GB00B59G4Q73

Authorised Corporate Director: Vanguard Investments UK, Limited ("VIUK")

Objectives and investment policy

- The Fund seeks to track the performance of the FTSE Developed World ex-U.K. Index (the "Index")
- The Fund is a passive fund which means it takes the form of tracking a specific index in order to replicate its performance.
- The Index is comprised of large and mid-size shares providing coverage of developed markets around the world, excluding the U.K. The Index is a free-float market-capitalisation weighted index derived from the FTSE Global Equity Index Series (GEIS), which covers 98% of the world's investable market capitalisation.
- The Fund attempts to:
 - Track the performance of the Index by investing in all constituent shares of the Index in the same proportion as the Index.
 - Remain fully invested and hold small amounts of cash except in extraordinary market, political or similar conditions where the Fund may temporarily depart from this investment policy.
- The Fund may use derivatives (i.e. a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index) in order to reduce risk or cost and/or generate extra income or growth (known as "efficient portfolio management").
- The currency of the share class is GBP.
- The Fund invests in securities which are denominated in currencies other than the share class currency. Movements in currency exchange rates can affect the return of investments.
- The Fund may not be appropriate for short-term investment.
- Income from the Fund will be reinvested and reflected in the price of shares in the Fund.
- Portfolio transaction costs will have an impact on performance.
- Shares in the Fund can be bought or sold on a daily basis (save on certain bank holidays or public holidays and subject to certain restrictions

described in Appendix 1 of the prospectus) by submitting an application in writing or by telephone. A full list of the days on which units in the Fund cannot be sold is available on:

Risk and reward profile

For further information on risks please see the "Risk Factors" section of the prospectus on our website at <https://global.vanguard.com>

- This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.
- The risk category shown is not guaranteed and may change over time.
- The lowest category does not mean "risk free".
- The Fund is rated 5 due to the nature of its investments which include the risks listed below. These factors may impact the value of the Fund's investments or expose the Fund to losses.
 - The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
 - Movements in currency exchange rates can adversely affect the return of your investment.

The risk and reward indicator does not take account of the following risks of investing in the Fund:

- Counterparty risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Liquidity risk. Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily which could cause the Fund to incur higher costs when buying or selling investments or could mean that the Fund is not able to buy or sell investments when it would like to do so.
- Index tracking risk. The Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.
- Index sampling risk. As the Fund uses an index sampling technique whereby a representative sample of securities are selected to represent the Index, there is the risk that the securities selected for the Fund may not, in the aggregate, approximate the full Index.
- Use of derivatives. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value.
